

Proposal for "Angel Mi Ayudante de Lectura" - Supplemental Reading Program  
By Lori Morris and Bette Kish of Kishmorrproductions, LLC

"Angel Mi Ayudante de Lectura" is designed to be used by children ages 4-8 who are learning to read. The intentional use of our program 10-20 minute daily within the Language Arts/Reading block would be considered best practice since students/users would be actively engaged in educational activities to increase fluency, comprehension and vocabulary development.

The activities, games, songs and stories included are geared for children who are in primary grades developing literacy in Spanish or who are becoming Bi-literate in English and Spanish.

Our program is based on the research principles stating that literacy learned in one language is transferred and applied to a second language. This is why "Angel Mi Ayudante de Lectura" is perfect for Bilingual programs, Dual language, and Spanish Immersion or ESL classes. Anywhere that children are learning to read; our program can help.

Our suggestion is for teachers to log-in to our program or train students to log in daily and leave the program set up on the computer during reading instruction. Students can rotate into the computer station where they independently practice literacy concepts previously taught by the teacher. Our program guides students from the most basic concepts of print to higher levels of reading. This is done with minimal teacher assistance since Angel, the narrator, and the blinking icons create a pathway so that users are guided to increased fluency and comprehension.

Flexibility for varying levels of ability is built into the program. We offer a pre-test and post-test that can be administered online and the results can be emailed to the teacher for reviewing and sharing with parents or RTI teams. We have 5 reading levels with 22 animated stories. Our 5 books have title pages, and each story is listed so that if a student likes a specific story, that can be revisited rather than having to read the whole book again. Highlighting the words guides the reader's eyes to model and foster increased fluency at all levels of reading.

Students can begin and end with any component of the program, there is no wading through content to get to a specific activity. The chalkboard icon is on each screen and leads the user right back to the classroom at any time.

The \$9.99 cost is per month for each user name; however, we offer lower subscription rates for higher volumes of accounts. Each computer available to ages 4-8 should be assigned a user name and password. The price is not per student, but rather per user name/ account. These can be transferred to different computers, but no more than one computer can use the same account at once, of course.

"Angel Mi Ayudante de Lectura" is available for preview at our website: [www.readandlearnspanish.com](http://www.readandlearnspanish.com) where we have a demo, content descriptions, price list, progress monitoring tool, and list of Texas Essential Knowledge and Skills that are included in our program. These documents are available for print so that they can be presented to any administrator or financial manager.

We would love to hear from you with questions or comments.
